

MACHINE SHOULDER PRESS (REVERSE - WIDE GRIP)

1. Sit down on a **Shoulders Press Machine** in reverse with your front facing it's back pad. Adjust the seat according to your height so that the machine's arm grips are on the same level as your shoulders, then select your desired resistance to be used. Place your feet firm on the floor at about shoulders width apart. Grab the two wide arm grips placed next to your shoulders, with your elbows bent and in-line with your torso. This will be your starting position.
2. While maintaining a straight & upright torso, use your shoulders muscles to lift both arm grips all the way up until your arms are fully extended, and while keeping a straight & upright torso throughout the entire movement.
3. Slowly bring the arm grips back down to their starting position, while keeping your shoulders muscles fully engaged and under constant tension.
4. Repeat this motion for the recommended amount of repetitions.

CAUTION: NEVER use a heavy weight setting when performing this exercise to avoid getting any shoulders, elbows and/or back injury. A proper adjusted weight setting that is not too heavy should have you mostly engage your shoulders muscles -as it should- without putting negative pressure on your spine and/or putting your shoulders at risk for injury. Lower down the weight resistance if you ever felt that your shoulders muscles and/or back are being overstrained. It is normal for you to feel your upper back muscles (trapezius muscles) also getting slightly engaged while performing this exercise.

ALTERNATIVE EXERCISES: [Seated Overhead Dumbbell Press](#) / [Seated Military Press](#)

MACHINE SHOULDER PRESS (REVERSE - WIDE GRIP)

PRIMARY MUSCLE

A **primary muscle** is the main muscle group responsible for controlling a certain movement or that is primarily engaged when performing a certain exercise.

Muscle engagement should be **%80 - %90** when performing this exercise.

SECONDARY MUSCLE

A **secondary muscle** is the muscle group that assists a main muscle group when performing a certain movement or when performing a certain exercise.

Muscle engagement should be **%20 - %10** when performing this exercise.
