

SEATED CABLE ROWS (UNDERHAND GRIP)

1. Attach an **EZ-Bar** to a low pulley row machine, then select your desired resistance to be used.
2. Sit down and place your feet against the lower part of the machine's front platform, while making sure that your knees are slightly bent and not locked. Lean over as you maintain the natural alignment of your back and grab the middle/narrow part of the **EZ-Bar** in an underhand grip, with the palms of your hands facing forward and your hands being slightly tilted inwards due to the shape of the bar. Your arms should be fully extended, your back should be upright, and your chest should be sticking out. You should also feel a nice stretch on your lats muscles as you hold on to the **EZ-Bar** in front of you. This will be your starting position.
3. Use your lats & back muscles to pull the **EZ-Bar** all the way to your midsection, while retracting your shoulder blades and contracting your back muscles as hard as you can. Keep pulling the **EZ-Bar** until it almost touches your abdomen.
4. Slowly return the **EZ-Bar** all the way back to its starting position, while keeping your lats & back muscles fully engaged and under constant tension.
5. Repeat this motion for the recommended amount of repetitions.

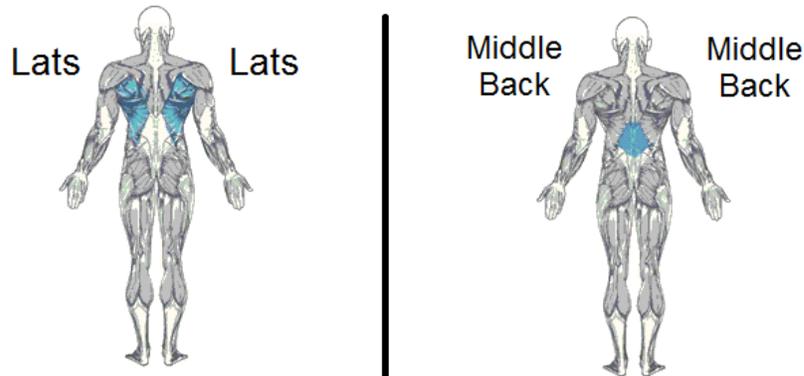

CAUTION: NEVER use a heavy weight setting when performing this exercise to avoid getting any back, shoulders, biceps and/or wrists injury. A proper adjusted weight setting that is not too heavy should have you mostly engage your lats & back muscles -as it should- instead of having you rely on your arms to perform this exercise. Lower down the weight resistance if you ever felt that your arms are being more engaged than your lats & back muscles which should be the main muscle groups you're targeting. It is normal for you to feel your rear deltoids (rear shoulders) & trapezius muscles also getting slightly engaged while performing this exercise. It is also normal for you to feel your biceps muscles getting a bit more engaged while performing this exercise than it does with other 'Seated Cable Rows' exercises due to the nature of the underhand grip that emphasizes a bit more on the biceps muscles while rowing the weight, but you should still focus more on engaging your back muscles than your arms.

ALTERNATIVE EXERCISES:

[Lat Pull Downs \(Underhand Grip\)](#) / [Bent Over EZ Barbell Rows \(Underhand Grip\)](#) / [Machine Assisted Chin-Ups](#)

SEATED CABLE ROWS (UNDERHAND GRIP)

PRIMARY MUSCLES

A **primary muscle** is the main muscle group responsible for controlling a certain movement or that is primarily engaged when performing a certain exercise.

Muscle engagement should be **%80 - %90** when performing this exercise.

SECONDARY MUSCLES

A **secondary muscle** is the muscle group that assists a main muscle group when performing a certain movement or when performing a certain exercise.

Muscle engagement should be **%20 - %10** when performing this exercise.
